Tech Talk Blog

Full Stack Developer

July 2024 - Present (7 months)

Kupang, East Nusa Tenggara, Indonesia

Tech Talk Blog is a dedicated platform where I share insights, tutorials, and best practices on various aspects of technology, web development, and software engineering. Whether you're a beginner looking to understand the basics or a professional seeking advanced tips, this blog offers valuable content to enhance your technical skills. Join me on Tech Talk Blog as we dive into the ever-evolving world of tech, exploring everything from JavaScript fundamentals to the latest development trends and tools.

Yayasan Sirih Pinang Kebaikan

Full Stack Developer

September 2024 - Present (5 months)

Kupang, East Nusa Tenggara, Indonesia

Developed and launched a comprehensive website for Yayasan Sirih Pinang Kebaikan, integrating multiple functionalities to support the foundation's mission. Key features include:

- Book Ordering System: Users can browse and purchase books directly from the site.
- Publisher Registration: Streamlined registration process for publishers to join and collaborate with the foundation.
- Article Reading and User Publishing Platform: Enables users to create accounts, write, and publish articles, enhancing community engagement and sharing valuable insights.
- Utilized React.js for a dynamic front-end experience and Node.js for a scalable back-end, ensuring a smooth and responsive user interface.

Freelance

Full Stack Developer

March 2024 - November 2024 (9 months)

Kupang, East Nusa Tenggara, Indonesia

As a freelance developer, I developed a web-based Decision Support System for granting parole rights to inmates using the TOPSIS (Technique for Order Preference by Similarity to Ideal Solution) method. This system aids decision-makers by evaluating and ranking inmates based on specific criteria, enabling a more objective and data-driven approach to determining parole eligibility. By utilizing the TOPSIS method, the system identifies inmates who most closely meet the ideal criteria for parole, promoting transparency and fairness in the decision-making process.

This project strengthened my skills in applying the TOPSIS method for multi-criteria decision-making and developing user-centric, web-based applications tailored to real-world needs in the criminal justice sector.

BPS Kota Kupang

Full Stack Developer

July 2022 - December 2022 (6 months)

Kupang, East Nusa Tenggara, Indonesia

During my practical work at BPS, I developed a profile website for Kelurahan Oetete, integrated with an information system for local UMKM (Micro, Small, and Medium Enterprises). The website was designed to showcase a comprehensive profile of the kelurahan, including essential facilities like healthcare, education, and public services. Additionally, it features data visualization for UMKM, presenting statistics in graphical form—such as types of businesses, workforce numbers, and business growth trends within the kelurahan—using Chart.js for interactive and dynamic charts.

This project was built using MySQL for database management, with a frontend developed using Bootstrap 5.1, Node.js, and the EJS template engine, providing an efficient, server-rendered experience. Working on this project strengthened my skills in web development, database management, and data visualization, enabling me to contribute to digital solutions that empower local communities and support UMKM growth.

Education

Universitas Nusa Cendana

Associate's degree, Computer Science · (2020 - 2025)
